WAFFER CHECK VALVE
RSK 500

Nominal size DN 40–200
Nominal size 1 1/2“–8“
Pressure PN 5–8 bar

Features
• narrow wafer flange version
• simple design
• O rings included in the scope of delivery for wafer type installation
• horizontal and vertical mounting
• optionally available with spring

Additional options on demand
• Free of surface disturbing substances

Attention
• Take the installation adapter for assembly into account
• Fit an installation adapter on the valve outlet side
• O-ring seal: Use welding stubs or flange adapters with flat jointing face
• Plan a settling zone of 5-10 x DN upstream and downstream of the valve
• Do not use valves without return spring for pulsating flows due to the formation of noise

**Pictogram Wafer check valve RSK 500**

**Options:**
- **Springs for horizontal installation**
  - 1.4571
  - Hastelloy

**Installation adaptors**
- PVC-U
- PP
- PE
- PVDF

**Basic normal size:**

| DN 8 | DN 10 | DN 15 | DN 20 | DN 25 | DN 32 | DN 40 | DN 50 | DN 65 | DN 80 | DN 100 | DN 125 | DN 150 | DN 200 | DN 250 | DN 300 | DN 350 | DN 400 |
|------|-------|-------|-------|-------|-------|-------|-------|-------|-------|--------|--------|--------|--------|--------|--------|--------|--------|--------|
|      |       |       |       |       |       |       |       |       |       |        |        |        |        |        |        |        |        |        |

**Sealings**
- EPDM
- FPM
- PTFE

- available
- not available

We reserve the right to make technical changes.

Issue 2018.10.01-en
Print-No. 301266
TR MA DE Rev002
**Wafer check valve RSK 500**

**Application**
- for regulation of a prescribed flow direction - backflow preventer

**Flow medium**
- Neutral and aggressive fluid or gaseous media, provided that the valve components coming into contact with the media are resistant at the operating temperature in accordance with the Stübbe resistance guide.
- Contaminated media may impair the sealing function.

**Flow direction**
- Always in the direction of the arrow

**Stübbe resistance guide**

**Nominal pressure (H₂O, 20 °C)**
- PN 5–8 bar

**Closing pressure**
- Hermetically sealed at 0.3 bar

**Opening pressure**
- See „Opening pressure“ table

**Version**
- Wafer check valve without return spring for vertical pipes.
- Wafer check valve with return spring for horizontal pipes. Spring as accessories.

**Medium temperature**
- See graphics „Pressure/temperature diagram“

**Operating pressure**
- See graphics „Pressure/temperature diagram“

**Size**
- DN 40–200

**Housing**
- PVC-U, PP, PVDF

**Shut-off disc**
- PVC-U, PP, PVDF

**Sealing element**
- FPM, PTFE, EPDM

**Connection**
- On the inlet side: with flange adapters or welding stubs according to DIN ISO with flat jointing faces
- On the outlet side: fit suitable installation adapters (see installation of adapter „Spigot“) to ensure correct opening

**Mounting position**
- vertical or horizontal, please note the direction of the arrow on the valve housing

**Color**
- Housing: PVC-U, gray, RAL 7011
- Housing: PP, gray, RAL 7032
- Housing: PVDF, opaque, yellowish-white

**Accessories**
- Spring:
  - made of stainless steel (1.4571) or Hastelloy (C4)
- Installation adapter „Spigot“:
  - Nominal pressure (H₂O, 20 °C): PN 10
  - Housing: PVC-U, PP, PE, PVDF
  - Connection
    - Spigot end for solvent welding DIN ISO (PVC-U)
    - Spigot end for welding DIN ISO (PP), DIN ISO (PE), DIN ISO (PVDF)
  - Color
    - PVC-U: gray, RAL 7011
    - PP: gray, RAL 7032
    - PVDF: opaque, yellowish-white
    - HDPE: black, RAL 9011

**Attention**
- Ensure that the valve disc makes contact with the inner wall of the fitting before it reaches the max. opening angle, otherwise there is a risk of breakage.
- Spring accessories: We also recommend this type for pulsating flow conditions.
The pressure/temperature limits of the materials are valid for the stated nominal pressures and a service life of 25 years. These values are guide values for flow medium types which do not negatively impact the physical and chemical characteristics of the valve material. It may be necessary to take diminution factors into consideration. The operating life of the wear parts depends on the conditions of use.

**Description**

| Δp | Pressure loss |
| Q  | Flow          |

**Pressure loss and \( k_v \) value**

The diagram shows the pressure loss \( \Delta p \) in relation to the flow \( Q \).

**Conversion formulas**

\[ c_v = k_v \times 0.07 \]
\[ f_v = k_v \times 0.0585 \]

**Units**

- \( k_v \) [l/min]
- \( c_v \) [gal/min] US
- \( f_v \) [gal/min] GB
