Regulation 1907/2006/EC (REACH)

STÜBBE has informed oneself extensively of REACH and taken all necessary measures. Of course we fulfill our duties arising from REACH.

The regulation distinguishes between substances, preparations (= mixtures) and articles. STÜBBE is producer of articles according to the regulation. All necessary registrations of substances, which get in form of crude materials into our articles, are the responsibility of our suppliers or their suppliers.

In addition to our own articles we are also supplying a few preparations (i.e. special adhesives) from other companies with danger properties. But please note: This does not indicate a poor quality. Under technical considerations hazardous ingredients can not always be avoided. However, information on safe handling are given in the safety data sheets, which we provide free of charge, or as well as on the labels.

Insofar as it is applicable to our product spectrum, the restrictions of certain dangerous substances stated in annex XVII of regulation 1907/2006/EC are kept in.

We are keen to avoid substances of very high concern (SVHC-substances) in our products. Unfortunately this is technically not always possible. All substances identified as SVHC within the EU are summarized from the ECHA on the "candidate list", which will be updated regularly. For these substances an authorization requirement and inclusion in annex XIV of the regulation are planned and already partly implemented. In addition, according to article 33(1) of the REACH regulation, suppliers are obliged to inform commercial customers as soon as an article or subarticle with more than 0,1% (mass fraction) of an SVHC substance is delivered. STÜBBE fulfills its duty to provide information in the form of article texts on all order-related documents. During normal use there are no dangers arising from concerned products.

This information is based on our current knowledge. It is made by EDV and valid without signature.
